Available as a contractor or direct hire; no visa sponsorship required for remote work.

SUMMARY

Full-stack engineer with 2 years shipping production LLM agents for ecommerce and the AWS infrastructure behind them. Sole maintainer of a storefront AI shopping assistant at 300k-shopper scale; measures agent output with eval harnesses before release, and builds day to day through Claude Code.

EXPERIENCE

Full Stack Developer — Tolstoy **Nov 2024 – Present**
Shoppable video and AI shopping experiences for ecommerce brands (Shopify, Tapcart) *Remote*

- Sole maintainer of the AI shopping assistant in merchant storefronts, including Culture Kings (~300k shoppers): catalogue search, size recommendation, virtual try-on, add-to-cart, and hand-off to a human when it cannot answer
- Raised virtual try-on rule adherence from 46% to 75% on 900+ samples with an LLM-as-judge eval harness calibrated to hand-labelled ground truth, using 50-sample pilot runs to cut prompt-tuning cost
- Added voice and video modes to the assistant: shoppers talk in a live call and, camera on, see a try-on rendered on themselves mid-conversation, with the server owning tool execution and the transcript
- Built a sandboxed coding agent that generates and edits storefront widgets for 4 targets (Liquid, JavaScript, React, Tapcart), running each generation in an isolated environment
- Built a retrieval-based support agent over Tolstoy's help documentation that answers routine merchant questions and escalates ambiguous ones to support staff
- Deployed containerised AI services on AWS ECS behind an Application Load Balancer, removing the Lambda cold-start and timeout limits that capped long-running LLM calls

Founding Engineer — Framework (Tolstoy internal venture) **Nov 2024 – Oct 2025**
Customer-operations platform for Tolstoy accounts; held concurrently with the role above *Remote*

- Designed an issue agent that triages 200+ Slack and Gmail messages a day, resolving routine account issues from account context and history and escalating the rest
- Built the serverless backend on Lambda, SQS, DynamoDB and RDS behind a Zod-validated API layer, chosen for cost and deployment speed
- Aggregated Tolstoy platform events into a customer-activity layer powering account dashboards and reporting, replacing manual log inspection

Full Stack Developer, Intern — El Progreso De Cebuano Pty Ltd **Feb 2024 – Apr 2024**
• Built MERN web applications with real-time updates via MongoDB change streams and Socket.io

PROJECTS

- **AI Receptionist** — web chat for small businesses that answers FAQs from the owner's own documents, books appointments and captures leads into a dashboard; Next.js, Supabase, LLM tool calling · ai-receptionist-eta-three.vercel.app
- **AquaLoop** (client project) — cashback and loyalty dashboard for a water-delivery business: ledger, orders, reports and a public balance lookup by mobile number; live since Jul 2026 · johnmicky-butnande.vercel.app/work/aqualoop

SKILLS

Languages TypeScript, JavaScript, Python, SQL
Backend Node.js, REST APIs, serverless, containerised services, event-driven architecture
Cloud AWS (CDK, ECS, ALB, Lambda, DynamoDB, RDS, SQS, SNS, S3, CloudFront, SES), PostgreSQL, Supabase, MongoDB
AI LLM agents, tool calling, RAG, LLM-as-judge eval harnesses, sandboxed code execution, Vercel AI SDK
Frontend React, Next.js
Tools Claude Code (primary development workflow), Cursor, Git, GitHub

EDUCATION

BS Information Technology — Misamis University, Ozamiz City · 2024
