SUMMARY

Full-stack engineer specializing in AI systems and cloud infrastructure — from LLM-powered agents and event-driven pipelines to production AWS deployments. Founding engineer experience at an early-stage startup, with a track record of owning features end-to-end across backend, infra, and AI integration.

PROFESSIONAL EXPERIENCE

FULL STACK DEVELOPER

Tolstoy

November 2024 - Present

- Built an AI Support Chatbot (Vercel AI SDK) that retrieves and synthesizes help documentation to automate customer inquiries — reducing support ticket volume by ~30% while escalating complex cases to human agents.
- Built a sandboxed coding agent that generates and modifies platform-specific ecommerce widgets across 4 environments (Liquid, JavaScript, React, Tapcart) — enabling dynamic, isolated code execution per generation request.
- Deployed containerized AI services on AWS ECS behind an Application Load Balancer (ALB), eliminating serverless cold-start and timeout constraints for sustained low-latency LLM execution.
- Improved try-on rule adherence for shopper agent (virtual try-on widget) from 46% → 75% (+29pp) on 900+ samples. Built an LLM-as-judge eval pipeline calibrated against hand-labeled ground truth, then used pilot-sample iteration (n=50) to cut prompt-tuning cycle time and cost vs. full-dataset runs.
- Participated in migrating a legacy codebase back to Tolstoy's platform, ensuring zero regressions across existing features and services.

FOUNDING ENGINEER

Framework

November 2024 - October 2025

- Designed and built an AI Issue Agent that processes 200+ Slack and Gmail messages per day — performing semantic analysis on account context and issue history to autonomously manage the full issue lifecycle.
- Built a serverless backend using Lambda, SQS, DynamoDB, and RDS — chosen for cost efficiency and deployment speed — with a structured, type-safe API layer enforced by Zod schemas.
- Ingested and processed Tolstoy platform track events into Framework, building an aggregated event layer that powers customer activity dashboards and reporting — giving teams real-time visibility into customer behavior.

FULL STACK WEB DEV INTERN **Progreso De Cebuano Pty Ltd**

February 2024 - April 2024

- Built and maintained web applications using the MERN stack; implemented real-time data processing with MongoDB Change Streams and Socket.io.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js
- **Backend:** Node.js, REST APIs, Serverless (AWS Lambda)
- **AI & Agents:** Vercel AI SDK, LangChain, LLM integration, agent workflows, sandboxed code execution
- **Cloud & Infra:** AWS CDK, ECS, ALB, Lambda, S3, SQS, SNS, CloudFront, SES, RDS, DynamoDB
- **Databases:** Supabase, PostgreSQL, DynamoDB, MongoDB
- **Tools:** Git, GitHub, Cursor, Postman

EDUCATION

MISAMIS UNIVERSITY

Ozamiz City, 7200

Bachelor of Science in Information Technology
